Kinetics of branchial calcium uptake in the rainbow trout: effects of acclimation to various external calcium levels

By S. F. PERRY AND C. M. WOOD

J. exp. Biol. **116**, 411–433.

This replaces the printed version on page 421 of this paper.

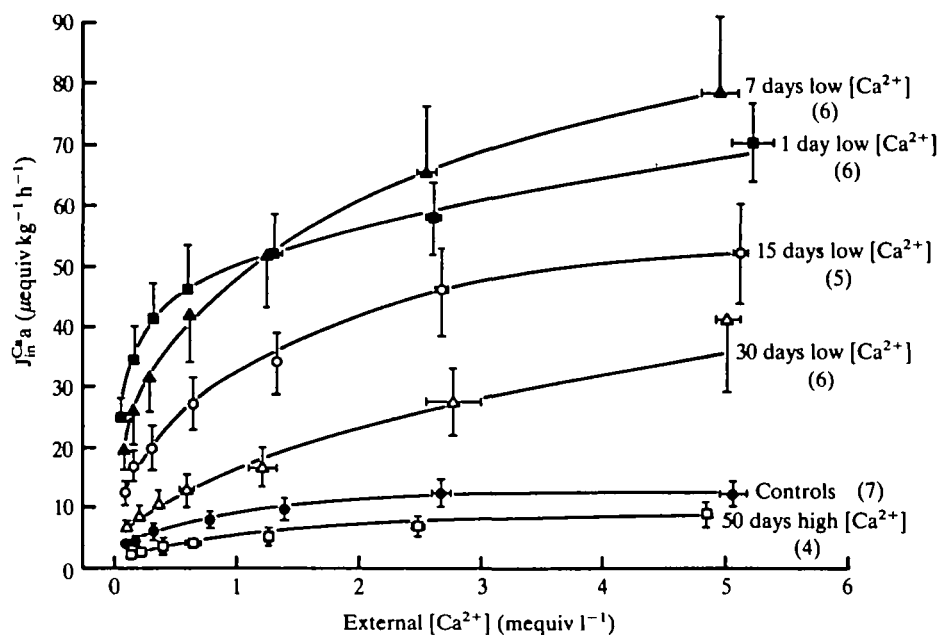

Fig. 2. The effects of low and high $[Ca^{2+}]$ acclimation for various periods on the kinetics of Ca^{2+} transport across the arterio-arterial circulation (J_m^{Ca}) in the perfused trout head during progressive increases of external $[Ca^{2+}]$. Numbers in parentheses indicate number of fish examined. All values are means $\pm 1 \text{ S.E.}$
